

ChE 3820 Measurements Laboratory: Oral Presentation Evaluation:

Technical Content (75 points)	Score (1-10) 10 = Excellent; 1=Poor
1. Introduction and Problem Statement: Provides a clear statement of the objective of the experiment and the reasons for doing it.	
2. Apparatus and Measurements: A clear description of the experimental apparatus is given, as well as what measurements were made and how they were taken.	
3. Results and Discussion: Explains what the results were, what they mean and how they fit together.	
4. Conclusions: What important conclusions can be drawn from the experiment and how do they relate to the collected data?	
5. Visual aids: PowerPoint slides are easy to read, with correct font sizes. Graphs are clearly labeled and present data appropriately. Students should avoid presenting data in tabular format.	
Effectiveness of Presentation (25 points)	
1. Material is well organized.	
2. Presents well mechanically. Does not block screen, does not read slides, no nervous behaviors, etc.	
3. Makes eye contact with audience.	
4. Speaks at an appropriate volume.	
5. Smooth transitions between group members.	
6. Presentation is finished on time (15 minutes).	
7. Handles questions well.
